

OpenSpace is the only product on the market that eliminates the time-consuming, manual task of uploading, naming and mapping each photo onto project plans. We even auto-generate PowerPoint reports for you with a one-button click.

How It Works

Mount a 360 camera to your hardhat & walk the site as usual.

Our cloud-based AI platform processes and stores the data.

Imagery is automatically mapped to project plans.

Access our browser-based virtual jobsite viewer on mobile or desktop.

Everything integrates with project management software.

In the past, I would fall behind, because I typically do captures at the end of the day. It took so long to download the imagery from the camera, save it, and upload it. With OpenSpace, it's 20X faster, because the capture is connected to the project plan and the imagery is automatically positioned on the plans."

Tyler Rohde, PE, Novo
